Handed out by:

e-Vision 55 plus

Project eVision55+

Everything about the eye:

Information, Support and
Internet Communication

for people with
age-related
sight loss

vision55plus.eu

Target group

People over the age of 55

with age-related sight loss

employed, unemployed & retired

with at least basic computer skills*

and
with a healthy dose of curiosity

* Internet computer required

Offer

What the Project will do for you

We provide you with information on age-related vision loss and professional contact persons if needed via an Internet platform especially developed for people aged 55+.

Topics include:

- ➔ using your computer after sight loss
- ➔ tips for coping with daily living activities
- ➔ aid and appliances available
- ➔ information and communication via Internet

By learning to deal with your sight loss you will improve your quality of your life and personal independence. Furthermore you will discover the convenience of communication via Internet and learn about Internet shopping, banking or contacting public authorities.

There is no charge for project services.*

* Computer and Internet costs are not taken over by the project.

Background

United Kingdom and Europe's population is getting older. Age-related sight loss is now a common feature of getting older. Our project will provide information to you about coping with sight loss.

This will help you maintain your independence.

You don't need to abandon beloved and daily essential things.

Reading and computing are activities you will be able to accomplish by yourself.

You'll keep in touch with current trends.
